

## Lead Frontend Developer for tech startup with global clients

Opeepl is looking for an experienced frontend developer to take on the role as Lead Frontend Developer. You will work with in a small team with direct reference to the CTO. If **clean code, best practices, automated testing** and **UX design** is something you're passionate about, you may be the one we're looking for.

You will have the opportunity to decide the technological direction of the company and be working with current technologies.

You will be working in our office located in the Founders House startup community in central Copenhagen.

### The Job

As a Lead Frontend Developer you will be responsible for the frontend development of Opeepl's web platform and cross platform mobile app. As we're a small team, backend development opportunities are also an option at times.

We're looking for someone who can to take ownership of our frontend platforms. You should enjoy doing both incremental improvements on current solutions and being responsible for creating the architecture of new platforms.

As a developer you have **at least 4 years of professional experience** with frontend development. You are strong on the technical aspects of frontend development.

As a person you are a thorough, self-driven and curious about technology.

### Skills And Qualifications:

- Great at Javascript (AngularJS, Knockout.js, jQuery or similar)
- Good understanding of best practices for frontend architecture
- Excellent at CSS/SASS + HTML5 and responsive design
- A good eye for design
- Good understanding of UX design
- Experience with frontend tooling (bundlers, package management, etc.)
- Experience in automated testing and CI is welcome

### The Company

Opeepl develops and markets a revolutionary consumer insights technology that radically improves decision agility for global consumer-oriented companies. Since launch, Opeepl has developed rapidly and today offers insights from more than 200 countries. The concept is offered as a SaaS solution with an online interface activating more than 500 million respondents globally via smartphones. Notable clients include Google, Nestlé and eBay.
